About Me

Hello, I'm Reza Barati. If I were to describe myself a little, I'd say I'm an energetic and hardworking person who's always striving to improve and achieve my goals. I started programming in 2019, and from the very beginning, I wanted to create something that anyone, regardless of their knowledge level, could easily use. That's why I became interested in front-end web development and decided to specialize in this field.
